Control-it

Sampling Control Seals

LABOCONTROLE®
Sampling Equipment

LABOCONTROLE Sampling Control Seals are based on a highly adhesive backing in order to repair sacks after sampling.

LABOCONTROLE Sampling Control Seals are used to :

- produce a perfect sealing of containers (paper or plastic bags, BigBags...) after sampling, even if powder has been spilled on the surface,
- avoid product spillage after the sampling and the risk of outside contamination,
- guarantee the inviolability of the packaging and avoid the risk of contamination of the product itself after sampling,
- identify the effected sampling operation using either a text or colour marking.

Standard

- Super adhesive aluminium backing
- Round labels - 95 mm diameter
- Marking QUALITY CONTROL :
  white text on blue background
